differentiation

1. We used excellent job allocation strategy. Which can efficiently help us do our job and the branch is seperately well, which reduces stress and workload when we finally want to merge all of our work.

2. We make every user can accept the email of their order status. This makes our customer know exactly where is their package.

3. The User can define their own destination and the package can be delievered to their destination

4. we used a checker username status to notify the user that their UPS Account has been varified. And In this way, a customer can purchase a good only after he specified his valid UPS Account. Furthermore, we have set error handler, which make sure that our customer have to re-input their UPS Account if they used an invalid UPS Account.

5. For Better UX, we used bootstrap and adjust the layout of our django website to make user explore the website more easily. And they can change their Profile as they want in any time.
